

EEZ - An Overview

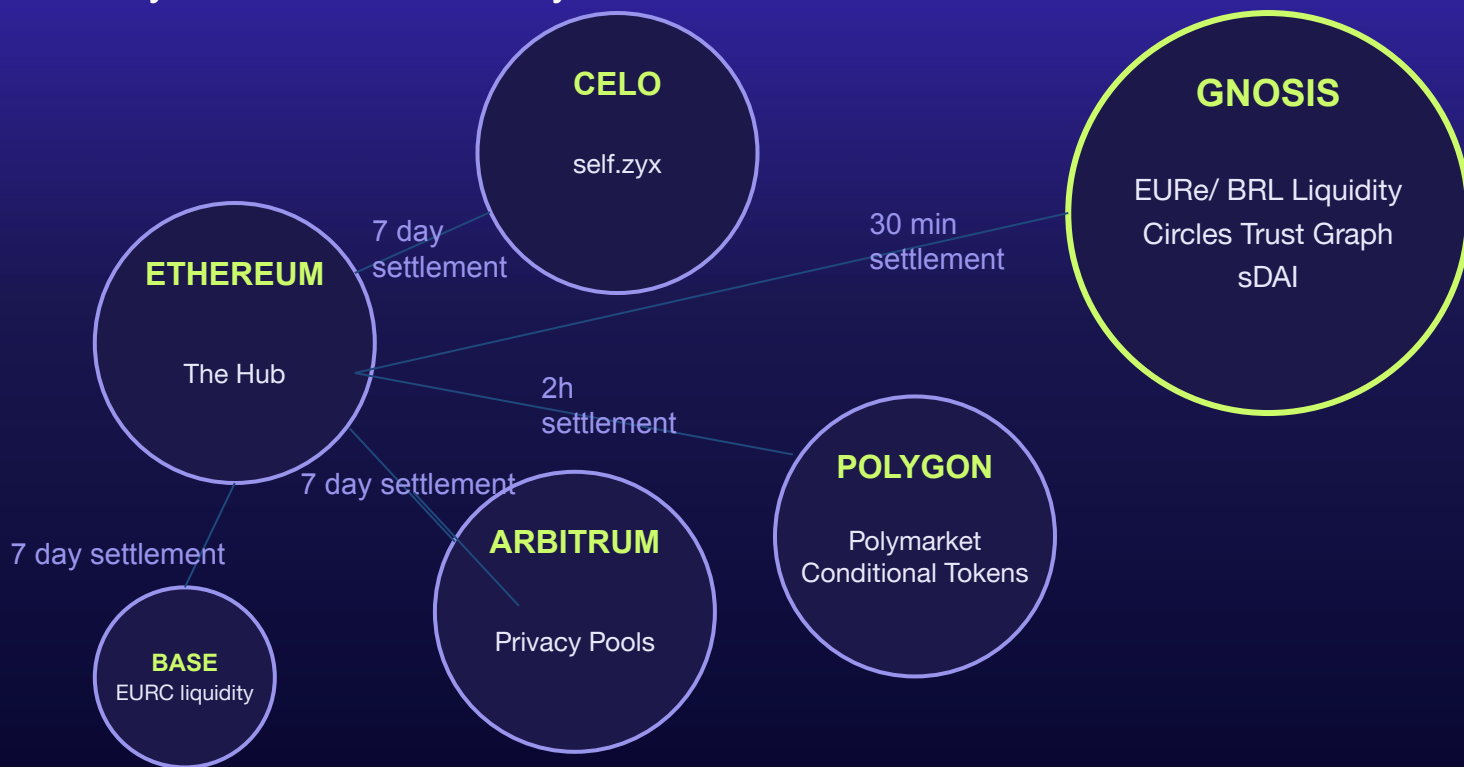

Martin Köppelmann · Gnosis

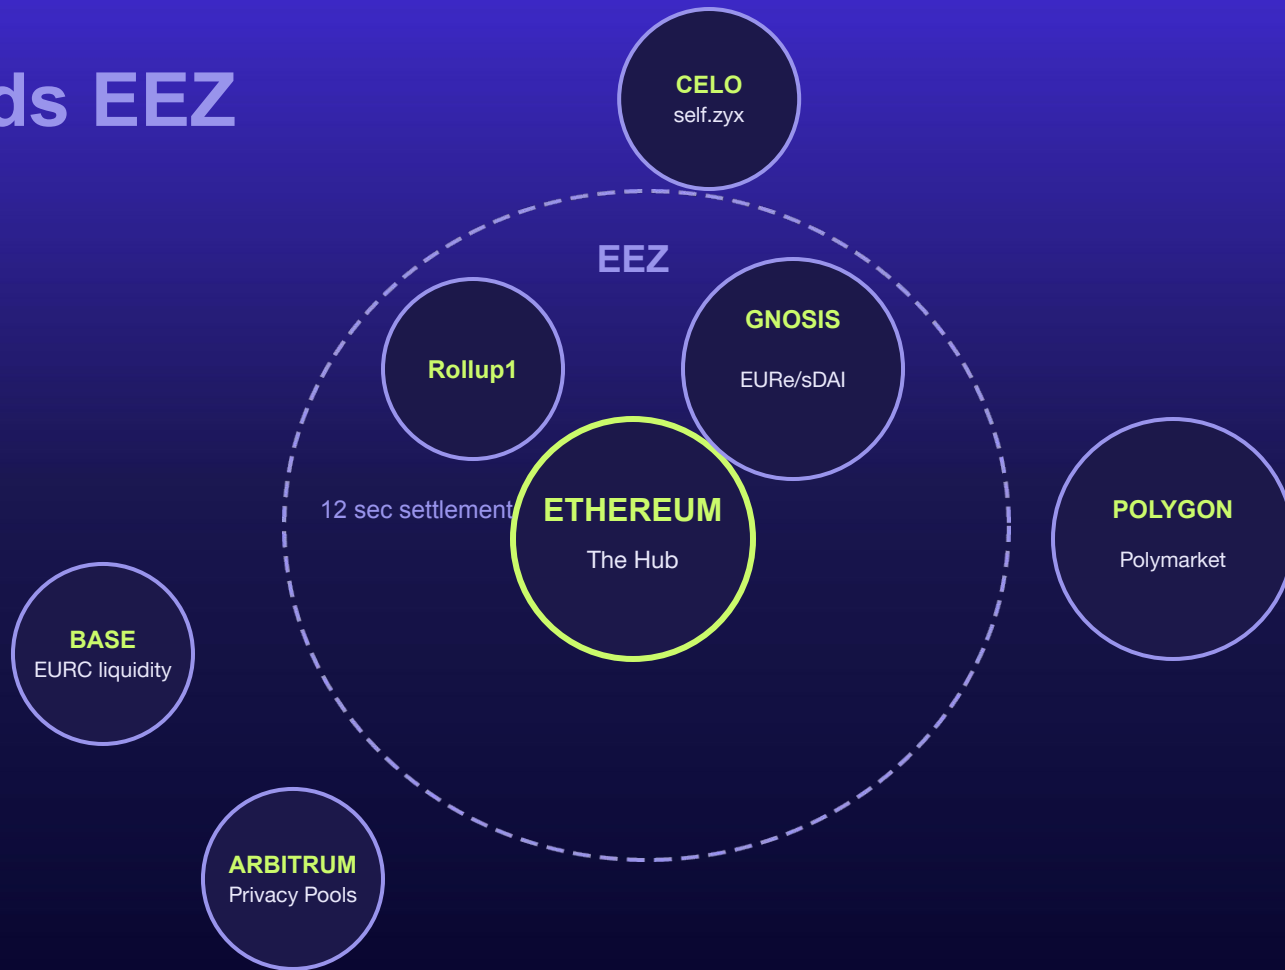

Fragmentation Kills Innovation

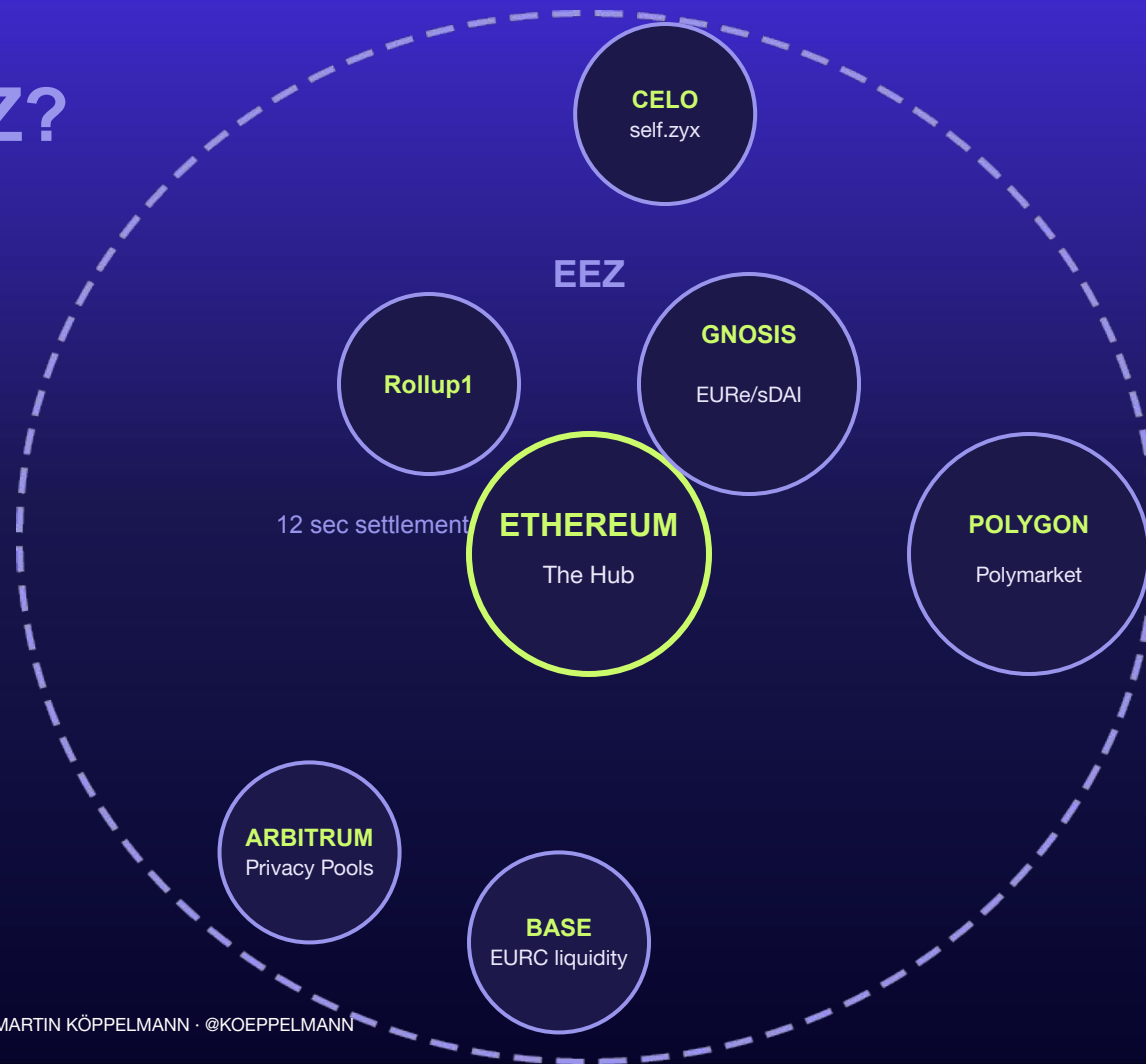

Unique ecosystems are isolated by chain boundaries

Towards EEZ

Full EEZ?

Today

Successful L2 are incredibly hard to bootstrap as they can't tap into the network effects of Ethereum.

EEZ

Any protocol or Token on Ethereum or EEZ is available from day 1

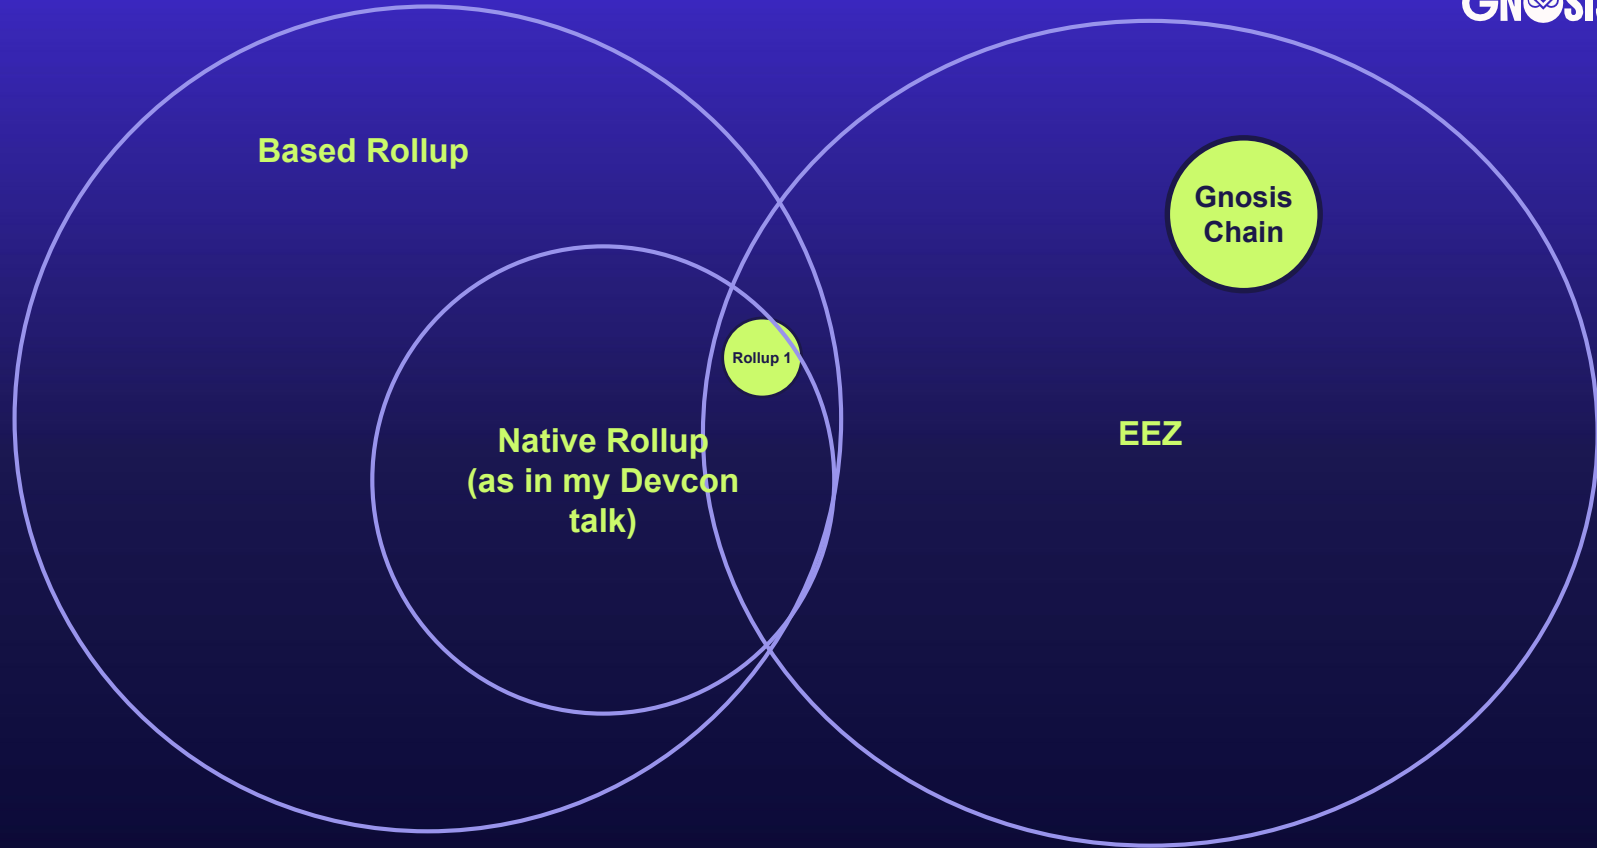

EEZ chains benefit and contribute to the network effects of Ethereum (and EEZ)

We have seen many attempts of “fixing interop” or “shared sequencing” in the past? Is EEZ different?

Yes, because EEZ put Ethereum at the center.

It's not a new “zone” that is only useful if enough chains join it—even the first chain joining EEZ will benefit because **Ethereum is part of it already.**

Do we even need L2s? Why not just L1?

- Cost
- Speed
- Distribution (franchise model)
- Neutrality

Ethereum is neutral, L2 can and should be opinionated
(e.g. I suggest Gnosis to not be neutral against hacker)

Featured Actions			
Action	Standard	Fast	Rapid
🔍 Swap	\$0.165	\$0.165	\$0.182
🔍 NFT Sale	\$0.279	\$0.279	\$0.307
🔍 Bridging	\$0.053	\$0.053	\$0.058
🔍 Borrowing	\$0.14	\$0.14	\$0.154

How it works?

Real time (< 12 sec) proving

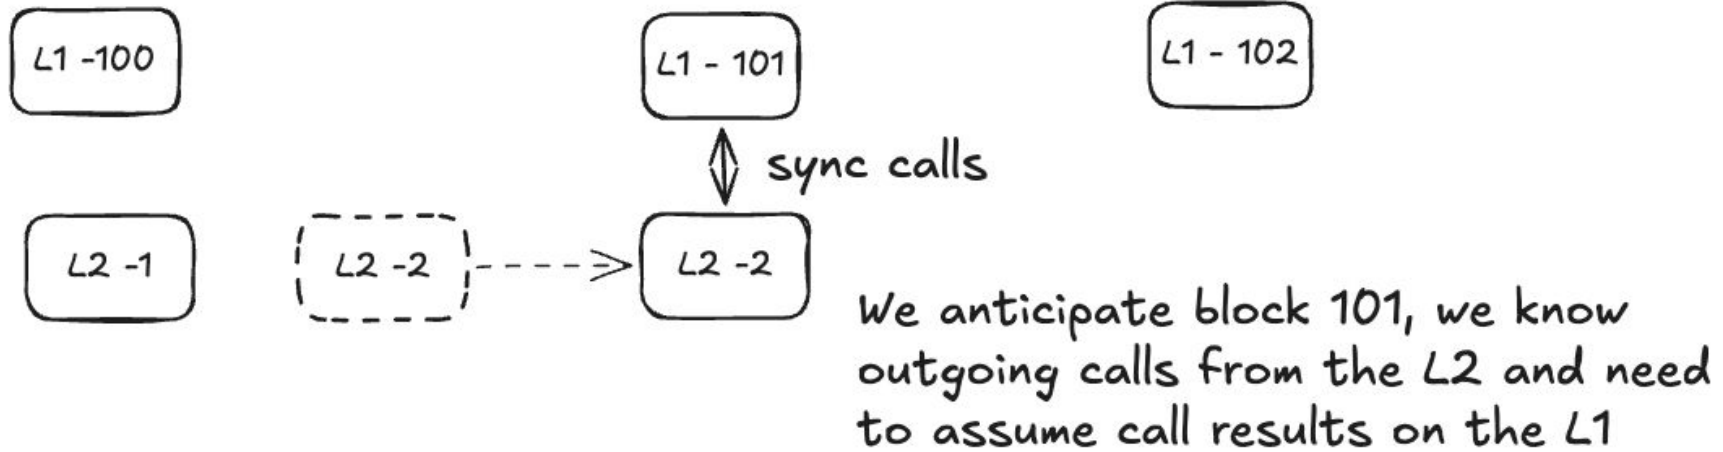

(can be zkProofs, can be TEEs or even simple multisigs)

Ethereum is the source of truth

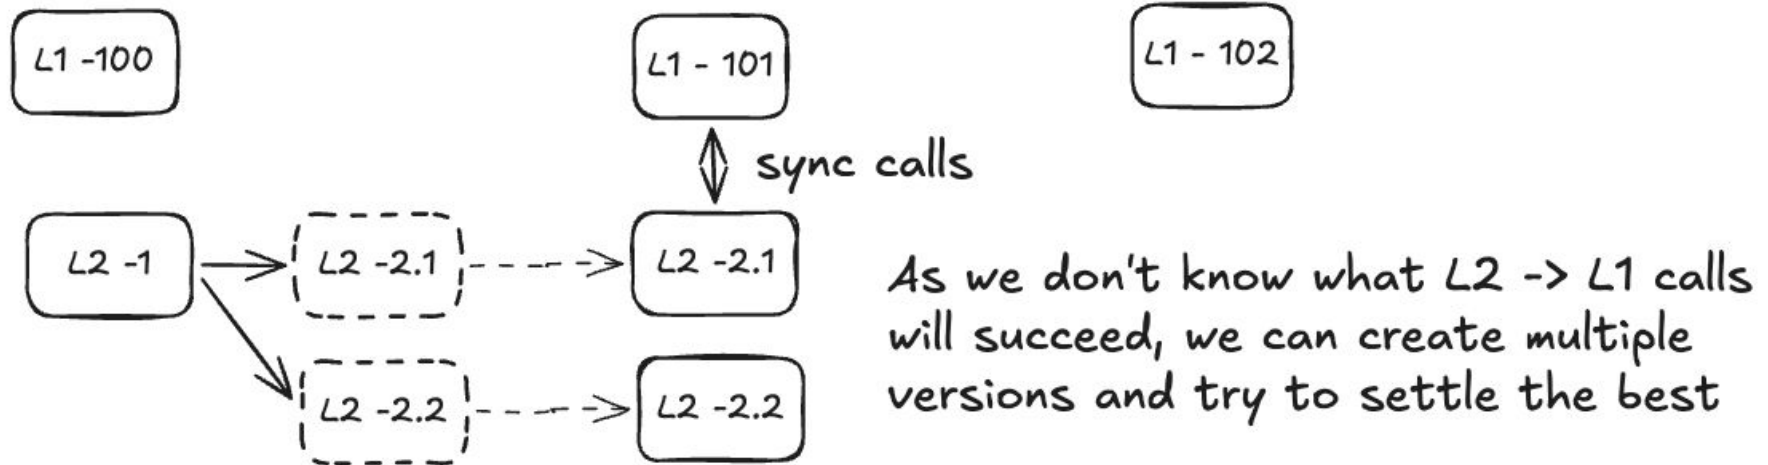

(aka if Ethereum reorgs, an EEZ L2 has to re-org as well)

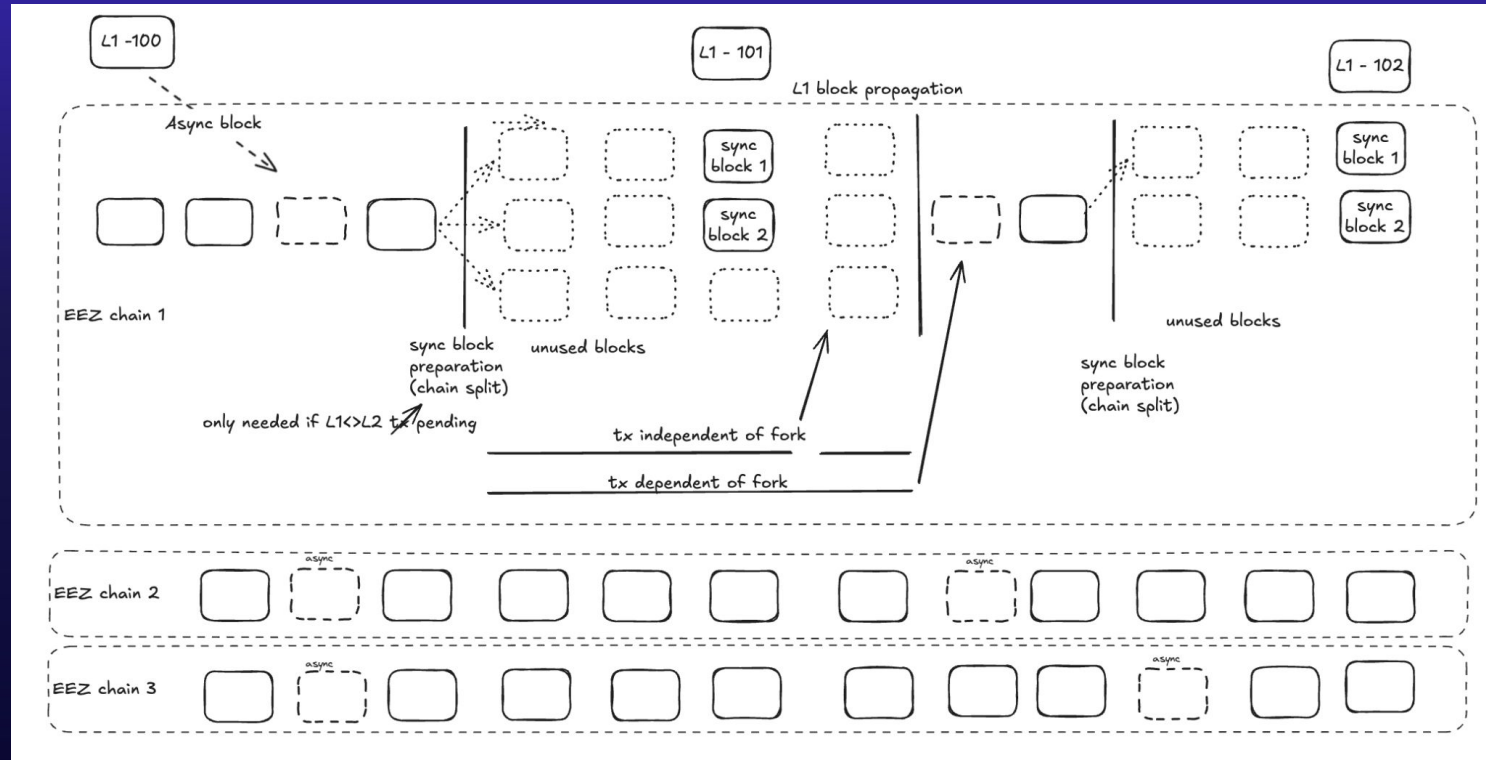

Time Traveling

Time Traveling

Outlook

Who permission do we need to make EEZ happen?

No ones! We can start today and have already POC
But builders and Validators
can make the real time settlements more reliable

Gnosis vs. Rollup 1

Feature

BLOCK TIME

SEQUENCING

NATIVE GAS TOKEN

NEUTRALITY

Gnosis

2 sec (with potential faster "flash blocks")

Sequencer

xDAI

Hardfork Ability Against
Hacks

Rollup 1

12 sec (as Ethereum)

Fully Based (L1 validator only)

ETH

Fully Neutral

OK, but when?

EOY

Rollup 1

Gnosis
